

## *Walk on Water*

PaverGuide™ is a structural base for paving systems. It is manufactured from recycled plastic and exceeds H-20 loading. PaverGuide™ is installed faster and cheaper than the stone it replaces, and at 90% void, it provides a massive rainwater reservoir and expansive infiltration surface. Apply PaverGuide™ to permeable surfaces and simplify complex drainage problems.  [learn more>](#)

**Product Size & Volume**

Base 24" X 20" X 3.25"  
Grate 24" X 20" X 0.25"  
2.1 lbs. per sf  
Minimum Storage Volume: .24399 cf/sf  
contact PaverGuide™ for sizing tables

**Drainage**

Commercial & Industrial stormwater storage  
Ultra low profile stormwater systems  
Permeable Paving for water quality  
Permeable Paving for peak rate control

**Green Infrastructure**

Permeable Paving for runoff reduction  
Permeable Paving for water quality  
Bio-Retention volume expansion  
Urban Tree root protection  
Green Roof drain channels and walkways

Applications	Solutions
Stormwater Infiltration and Detention	90% void space and strength for ultra shallow installations makes PaverGuide™ useful in commercial parking lots and areas of high groundwater, expensive excavation and permeable paving.
Residential Drainage	Place PaverGuide™ beneath driveways and patios for both drainage and elimination of subbase material. Lightweight for limited access areas.
Urban Sidewalks	Makes the impervious urban sidewalk function like a permeable surface. Capture runoff with trench drains and small basins and pipe stormwater to PaverGuide™ for an ultra shallow urban infiltration/detention solution.
Urban Trees	PaverGuide™ urban tree system protects roots and provides a huge watering system above the potential root zone and augmented soils. PaverGuide™ promotes radial roots and a huge root zone while providing structural support to streets and sidewalks. The system reduces compaction and stress to roots by effectively distributing loads over a large footprint.

*We know we have a solution that will work for you...we are*

Shallow: Easily capture the 100 YR rain event directly beneath pavement (Ultra Shallow Storage)

Strong: Proof load tested to support loads in excess of H-20

Flexible: Solutions from green roof to stormwater infiltration, commercial parking lot to residential patio
